Pin Configuration

Pin	Symbol	Functionality	
1	VC/OE/ \overline{ST} /NC	V control	Voltage control.
		Output Enable	H or Open ^[2] : specified frequency output. L: output is high impedance. Only output driver is disabled.
		Standby	H or Open ^[2] : specified frequency output. L: output is low (weak pull down). Device goes to sleep mode. Supply current reduces to I_std.
		NC	No connect (input receiver off).
2	GND	Power	Electrical and case ground.
3	CLK	Output	Oscillator output.
4	VDD	Power	Power supply voltage.

Note:

2. A pull-up resistor of <10 kΩ between OE/ \overline{ST} pin and Vdd is recommended in high noise environment when the device operates in OE/ \overline{ST} mode.

Absolute Maximum

Attempted operation outside the absolute maximum ratings of the part may cause permanent damage to the part. Actual performance of the IC is only guaranteed within the operational specifications, not at absolute maximum ratings.

SoftEdge™ Waveform Examples and Corresponding Harmonics Reduction

Figures below illustrate the harmonic power reduction as the rise/fall times are slowed from the standard squarewave output to that of the SoftEdge™ output. In general, the 1.8V device shows the lowest harmonics and provides best EMI performance comparing to devices with higher operating voltages.

Dimensions and Patterns

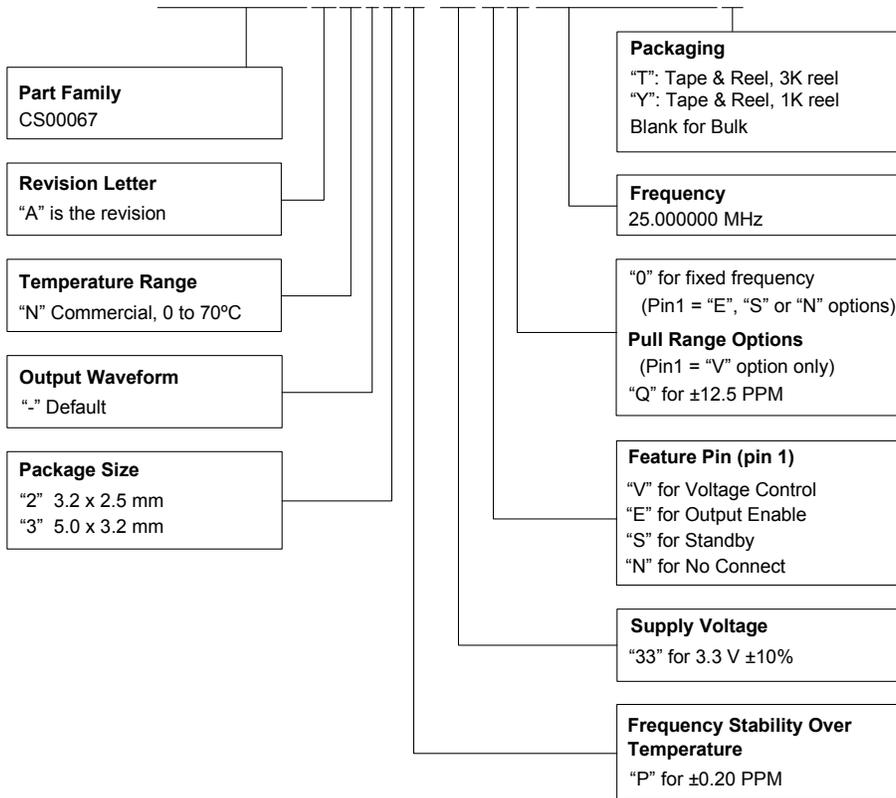

Package Size – Dimensions (Unit: mm) ^[3]	Recommended Land Pattern (Unit: mm) ^[4]
<p>3.2 x 2.5 x 0.75 mm</p> 	
<p>5.0 x 3.2 x 0.75 mm</p> 	

Notes:

- 3. Top marking: Y denotes manufacturing origin and XXXX denotes manufacturing lot number. The value of “Y” will depend on the assembly location of the device.
- 4. A capacitor of value 0.1 μF between Vdd and GND is recommended.
